

Lab 03: Advanced CAD - Hybrid III 6yo

- Create all of the parts for the Hybrid III 6yo test setup based on the attached drawings. You should create all of these parts and their associated drawings and assemblies as part of the same “Document” and share that document with Dr. Palmeri and the TAs.
- Create the mechanical drawings associated with each of those parts (i.e., recreate the drawings that you are using to generate the parts) and the assembly.
- Assemble your parts as guided by the assembly diagram and as shown in the uploaded animation. There are online tutorials on Assemblies if you need some refreshers:
 - <https://learn.onshape.com/courses/introduction-to-assembly-design>
 - <https://learn.onshape.com/courses/fundamentals-onshape-assemblies>
- A explosion video of the assembled parts is shown here: https://gitlab.oit.duke.edu/mlp6/MedTech-Prototyping-Skills/-/blob/main/labs/03-Hybrid-III-6yo/Assembly_v10.avi
- Export and concatenate PDFs for all of your drawings, screenshots of your part generation steps, and upload them to Gradescope.
- Please feel free to ask questions via Teams!
